

## Multiplication and Division Key Stage 1 to Key Stage 2

<p><b>KS1</b></p>	<p>Pupils should memorise and reason with numbers in 2, 5 and 10 times tables. They should see ways to represent odd and even numbers and know how they are represented in tables. This will help them to understand the pattern in numbers.</p> <p>Pupils should begin to understand multiplication as scaling in terms of double and half (e.g. that tower of cubes is double the height of the other tower).</p> <p>Commutative law shown on array. Repeated addition can be shown mentally on a number line. Inverse relationship between multiplication and division. Use an array to explore how numbers can be organised into groups.</p>

<p>NC 2014</p>	<p>Divide numbers up to 4 digits by a 1 digit number using the formal written method of short division and interpret remainders appropriately for the context (as remainders, as fractions, as decimals or by rounding, e.g. <math>98 \div 4 = 24 \text{ r}2 = 24 \frac{1}{2} = 24.5 \approx 25</math>).</p> <p>Solve problems involving multiplication and division including using knowledge of factors and multiples, squares and cubes. Solve problems involving addition, subtraction, multiplication and division and a combination of these, including understanding the meaning of the equals sign. Solve problems involving multiplication and division including scaling by simple fractions and problems involving simple rates.</p>	<p>Divide numbers up to 4 digits by a 2 digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate to the context.</p> <p>Divide numbers up to 4 digits by a 2 digit number using the formal written method of short division where appropriate, interpreting remainders according to the context.</p> <p>Solve problems involving addition, subtraction, multiplication and division.</p>
<p>Developing Conceptual/ Procedural Understanding</p>	<p><b>Using known facts</b> If <math>6 \div 2 = 3</math> then <math>6000 \div 2 = 3000</math> and <math>6000 \div 20 = 300</math></p> <p><b>Place value materials to represent calculations</b></p> <p><b>Short division</b> <math>483 \div 7 =</math></p> $\begin{array}{r} 69\text{r}1 \\ 7 \overline{) 483} \end{array}$ <p>"484 divided by 7. 4 hundreds cannot be shared equally between 7, so exchange the hundreds for 40 tens. I now have 48 tens which shared equally between 7 is 6 with a remainder of 6 tens. Exchange the 6 tens for 60 ones, we now have 64 ones. 64 shared equally between 7 equals 9 remainder 1. The answer is 69 r1."</p>	<p><b>Interpreting remainders</b> <math>17 \div 5</math> "What do I know? 17 is not a multiple of 5."</p>  <p><math>3 \frac{2}{5} = 3.4</math></p> <p>From knowledge of decimal/fraction equivalents or by converting <math>\frac{2}{5}</math> into <math>\frac{4}{10}</math>.</p> <p><b>Examples:</b></p> $\begin{array}{r} 17 \\ 581 \div 7 = \end{array}$  <p><math>581 \div 7</math> could be calculated by the formal written method of short division or it could be calculated by rearranging the dividend, using known facts, into 560 and 21.</p> <p><b>Representing problems</b> Correct the errors in the calculation below. Explain the error. <math>266 \div 5 = 73.1</math></p>

**Using known facts**  
If  $6 \div 2 = 3$  then  $6 \div 0.2 = 30$  and  $6 \div 0.02 = 300$

**Short division**  
 $97.6 \div 5 =$

$$\begin{array}{r} 19.52 \\ 5 \overline{) 97.60} \end{array}$$

"97.6 divided by 5. 9 tens shared equally between 5 is 1 with a remainder of 4 tens. Exchange the ten for 10 ones. I now have 47 units which shared equally between 5 is 9 with a remainder of 2 ones. Exchange the 2 ones for 20 tenths, we now have 26 tenths. 26 shared equally between 5 equals 5 with a remainder of 1 tenth. Extend the dividend with a 0 in the hundredths column. Exchange the tenth for 10 hundredths. 10 shared equally between 5 equals 2. The answer is 19.52."

**Long division**  
(thinking not generally recorded)  
 $384 \div 16$

1	16
2	32
4	64
5	80
8	128
10	160

"What do I know about the divisor?"  
Record partial tables.

$$\begin{array}{r} 24 \\ 16 \overline{) 384} \\ \underline{-32} \phantom{0} \\ 64 \\ \underline{-64} \\ 0 \end{array}$$

(38 tens  $\div 16 = 2 \text{ r}6$ ;  $2 \times 16 = 32$ )  
(bring the 4 down)  
(64 units  $\div 16 = 4$ )  
(no remainder)

 With questions of this type where the divisor is close to a number linked to the times tables, encourage the children to use known facts and adjustment to set up the partial tables.   |              | 60  | Adjust $\rightarrow$ | 59  | |--------------|-----|----------------------|-----| | $120 \div 5$ | 120 | 10                   | 118 | | $240 \div 5$ | 240 | 10                   | 236 | | $300 \div 5$ | 300 | 10                   | 295 | | $480 \div 5$ | 480 | 10                   | 472 | | $600 \div 5$ | 600 | 10                   | 590 |   **Representing problems** Megan divides 500 by 8 and gets the answer 62r4. She re writes it as  $62 \text{ r} \frac{1}{2}$ . Is she right? Explain your answer.  Using factors to simplify long division  $25 \overline{) 815}$ |
